BANDI RAVEENDRA REDDY

DevOps Engineer | Cloud Infrastructure | CI/CD | Kubernetes | IaC | AI Agents

+91 8618880260 | bandiraveendradevops@gmail.com | linkedin.com/in/bandiraveendra-reddy | Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 4+ years of experience architecting and automating CI/CD pipelines, cloud-native infrastructure, and container orchestration at scale. Deep expertise across AWS (25+ services), Kubernetes (EKS), Helm, Docker, Terraform, and Jenkins. Proven record in high-stakes production environments, achieving 99.9% uptime, reducing deployment time by 60%, and cutting security incidents by 70%. Experienced in Kong API Gateway, Cloudflare security, full-stack observability, and AI-agent-assisted DevOps troubleshooting and incident triage.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, EKS, ECS, Lambda, S3, RDS, Aurora, DocumentDB, SQS, SNS, VPC, IAM, ECR, Route 53, CloudWatch, Secrets Manager, KMS) | Azure (VMs, AKS, Storage, Virtual Networks)

CI/CD & Automation: Jenkins, Jenkins Shared Libraries (Groovy), GitHub Actions, GitLab CI, Azure DevOps, ArgoCD

Containers & Orchestration: Docker, Kubernetes (EKS/AKS), Helm, HPA, Auto-Healing, Pod Debugging, Amazon ECS

IaC & Configuration: Terraform, Ansible, AWS CloudFormation, ARM Templates

Networking & Security: Kong API Gateway, Cloudflare, VPC, VPN, ALB/NLB, Route 53, IAM, Secrets Manager, KMS, SonarQube, Trivy, OWASP

Observability: Prometheus, Grafana, CloudWatch, ELK/EFK, Coralogix, New Relic APM, Splunk, Datadog

AI Agents: AI-assisted DevOps troubleshooting, incident triage, log and metric analysis, root-cause investigation, and remediation guidance

Scripting & SCM: Python, Bash, Groovy, YAML, JSON | Git, GitHub, GitLab, Bitbucket, Nexus

PROFESSIONAL EXPERIENCE

DevOps Engineer | Acko - Bengaluru, India

Jan 2025 - Present

- Architected production-grade CI/CD pipelines using Jenkins and GitHub Actions, cutting deployment time by 60% and enabling 50+ daily zero-downtime releases.
- Designed Helm charts for EKS microservice deployments with parameterized *values.yaml* across Dev/UAT/Prod, eliminating configuration drift and automating rollbacks.
- Configured Kong API Gateway for authentication, logging, and request transformation, and Cloudflare for DNS, DDoS protection, and SSL/TLS termination.
- Managed multi-region AWS infrastructure via Terraform, including EC2 Auto Scaling, RDS/Aurora, DocumentDB, EKS, Lambda, SQS/SNS, ECR, and VPC networking.
- Implemented Route 53 failover and latency routing with ALB/NLB load balancing across 100+ microservices, sustaining a 99.9% uptime SLA.
- Built an observability stack with Prometheus, Grafana, Coralogix, and CloudWatch, reducing MTTR by 45% through proactive alerting and SLA dashboards.
- Enforced Trivy and SonarQube scanning, IAM least privilege, Secrets Manager rotation, and KMS encryption, reducing security incidents by 70%.
- Automated end-to-end service onboarding from Terraform provisioning to Kubernetes deployment, eliminating manual steps and accelerating delivery.

PROFESSIONAL EXPERIENCE - CONTINUED

DevOps Engineer | Cognizant - Bengaluru, India **May 2022 - Dec 2024**

- Built CI/CD pipelines for 25+ enterprise applications using Jenkins, GitHub Actions, and Azure DevOps, automating build, test, and multi-environment deployments.
- Containerized legacy applications with Docker and migrated them to Kubernetes, improving resource utilization by 40% and enabling horizontal scaling.
- Provisioned AWS and Azure infrastructure with Terraform, maintaining consistent staging and production environments across multiple regions.
- Deployed centralized ELK logging and Grafana dashboards for real-time application performance and system health visibility.
- Integrated Allure/Selenium testing and SonarQube scanning into delivery pipelines, improving code quality by 35%.
- Developed Python and Bash automation for incident response, backup management, and optimization, saving 20+ hours weekly.
- Mentored junior engineers on DevOps practices and authored runbooks for disaster recovery and incident response.

AI AGENTS PROJECT

AI-Assisted DevOps Troubleshooting & Incident Triage Agent

AI Agents | Observability | Kubernetes | Cloud Operations | Incident Response

- Developed an AI-agent workflow to support DevOps troubleshooting by analyzing logs, metrics, alerts, and deployment context during incidents.
- Used the agent to summarize symptoms, correlate operational signals, propose likely root causes, and recommend structured remediation and verification steps.
- Applied the workflow to Kubernetes pod failures, CI/CD pipeline errors, infrastructure issues, and production alert triage while retaining engineer approval for operational actions.
- Standardized troubleshooting output into incident summaries and reusable runbook guidance to improve consistency and knowledge sharing.

KEY ACHIEVEMENTS

- Reduced infrastructure costs by 30% through resource rightsizing, optimization, and automated shutdown policies.
- Achieved 99.9% availability through automated failover, health checks, and multi-region monitoring.
- Led the migration of 20+ applications from on-premise infrastructure to AWS and Azure ahead of schedule.
- Executed a Bitbucket-to-GitHub repository migration with zero disruption to live delivery pipelines.

EDUCATION

Bachelor of Engineering | Saveetha School of Engineering, Chennai **May 2019 - Apr 2022**
